

REPRO STAND L

The Silvestri Repro Stand L alone or in combination with the Repro Light Box L is the perfect tool for the reproduction and digitization of transparent negative and positive originals in black & white or colour. Unlike the use of scanners, which are often expensive and very slow, this system is fast and flexible. The Silvestri Repro Stand L offers limited dimensions, absolute precision, easy micrometric adjustment, especially in the short distance; 1/1, 1/2 etc. the progressive control of the focusing occurs at the same time facilitating the double operation.

The camera stays in place without the need for locking. The Repro Stand L has 4 adjustable feet for a perfect levelling of the plane and the arm of the column has a further adjustment for the perfect camera levelling.

REPRO STAND L

In combination with the Silvestri 24x30 Light Box L it allows the reproduction of transparencies on film or plate in 24x30 and smaller formats. With modern cameras or digital backs the reproduction becomes fast and of excellent quality.
